Sync Latency & UI Glitches Report

Report Date: 2026-05-03
Generated By: Engineering Team
Priority Filter: All Severity Levels

Overview

Project	Critical	High	Medium	Low	Total	Status
E-Commerce	1	3	5	2	11	Active
Desktop	0	2	4	3	9	Active
Mobile	1	2	6	4	13	Active
WebApp (PHP)	0	2	3	1	6	Active
TOTAL	2	9	18	10	39	ATTENTION REQUIRED

E-COMMERCE PROJECT BUGS

BUG-EC-001: Cart Sync Latency with localStorage

Project: E-Commerce Web
Priority: CRITICAL
Status: IN PROGRESS
Assigned To: Frontend Team

Created: 2026-04-28

Updated: 2026-05-03

Target Fix Date: 2026-05-10

Description

Cart updates take 2-3 seconds to persist to localStorage after user interactions. When users quickly add/remove items, some operations may be lost or duplicated in the state.

Symptoms

- User adds item → see in cart
- User immediately clicks another item → first item sometimes missing
- localStorage updates lag behind UI state by 2-3 seconds
- Console shows debounce delays

Root Cause Analysis

- **Component:** CartContext.tsx:89-112
- **Issue:** Sync function has 300ms debounce, but localStorage writes are not batched
- **Impact:** High latency on batch operations

Steps to Reproduce

1. Go to product listing
2. Rapidly click "Add to Cart" on 5+ items
3. Observe cart count updates slowly
4. Refresh page
5. Notice 1-2 items missing from cart

Expected Behavior

- All cart operations should sync to localStorage within 100ms
- No items should be lost on page refresh
- Batch operations should be atomic

Acceptance Criteria

- ☒ Sync latency < 100ms
- ☐ All items persisted consistently

- ☐ No race conditions on batch operations
- ☐ Unit tests for concurrency

Technical Notes

```
// Current problematic code
const syncCart = debounce(() => {
  localStorage.setItem('lpa_cart', JSON.stringify(items));
}, 300); // Too long!

// Should be:
const syncCart = debounce(() => {
  // Batch write with transaction simulation
}, 50);
```

Related Issues

- BUG-EC-002 (related: state inconsistency)

Affected Users

All users who add multiple items quickly (10% of cart interactions)

Files Affected

- src/context/CartContext.tsx
- src/hooks/useCart.ts

Proposed Solution

1. Reduce debounce to 50ms
2. Implement write batching for localStorage
3. Add request deduplication
4. Add error recovery mechanism

BUG-EC-002: Cart UI State Inconsistency

Project: E-Commerce Web

Priority:  **HIGH**

Status:  **IN PROGRESS**

Assigned To: Frontend Team

Created: 2026-04-27

Updated: 2026-05-03

Target Fix Date: 2026-05-08

Description

Cart badge shows different count than actual cart contents. After adding/removing items, UI state and context state can diverge.

Symptoms

- Cart badge shows "5" but cart has 3 items
- Remove item from cart → badge not updated immediately
- Quantity increment shows new qty but total incorrect
- Network requests still pending when user navigates away

Root Cause Analysis

- **Component:** CartSummary.tsx:45-67 and CartItem.tsx:22-38
- **Issue:** Race condition between action dispatch and re-render
- **Missing:** Proper state synchronization with optimistic updates

Steps to Reproduce

1. Add item to cart (badge updates to 1)
2. While network request pending, refresh page
3. Old quantity shows briefly before update
4. On checkout, totals incorrect

Expected Behavior

- Badge always reflects accurate item count
- Totals always calculated from current state

- No stale state displayed to user

Acceptance Criteria

- ☐ Badge count always matches cart items
- ☐ Totals recalculated on every state change
- ☐ No race conditions in state updates
- ☐ Visual indication of pending updates

Technical Details

```
// Issue: State updates not synchronized
const [items, setItems] = useState([]);
// Updates might not reflect immediately due to async dispatch

// Fix needed: Proper action handling with callbacks
```

Related Issues

- BUG-EC-001 (related: sync latency)
- BUG-EC-003 (related: quantity update glitch)

Affected Users

50% of checkout abandoners report this issue

Files Affected

- src/components/Cart/CartSummary.tsx
- src/components/Cart/CartItem.tsx
- src/context/CartContext.tsx

BUG-EC-003: Quantity Update Glitch (UI freezes on input)

Project: E-Commerce Web

Priority:  **HIGH**

Status:  UNSTARTED

Assigned To: Frontend Team

Created: 2026-04-30

Updated: 2026-05-03

Target Fix Date: 2026-05-09

Description

When editing cart item quantity, input field becomes unresponsive for 500-800ms after each keystroke.

Symptoms

- User types "3" in quantity field
- Field freezes for half a second
- Each keystroke causes pause
- On slow networks, freezes longer
- Mobile experience particularly bad

Root Cause Analysis

- **Component:** `CartItem.tsx:35-52`
- **Issue:** Unoptimized re-renders on every keystroke
- **Missing:** `useCallback/useMemo` for input handlers

Steps to Reproduce

1. Open cart page
2. Click quantity input on any item
3. Type quantity change
4. Notice input lag/freeze

Expected Behavior

- Input should be responsive immediately
- No lag on keystroke
- Smooth user experience

Acceptance Criteria

- ☐ Input response < 50ms

- ☐ No re-render lag on keystroke
- ☐ Smooth on mobile devices
- ☐ Performance test passes

Technical Solution

```
// Add memoization and useCallback
const handleQuantityChange = useCallback((newQty) => {
  updateQuantity(productId, newQty);
}, [productId, updateQuantity]);
```

Related Issues

- BUG-EC-002 (state inconsistency)

BUG-EC-004: Checkout Form Field Auto-Clear

Project: E-Commerce Web

Priority:  HIGH

Status:  UNSTARTED

Assigned To: Frontend Team

Created: 2026-04-29

Updated: 2026-05-03

Target Fix Date: 2026-05-11

Description

Checkout form fields randomly clear while user is typing, especially on slow mobile connections.

Symptoms

- User fills shipping address
- After 3-4 fields, previous fields clear
- Form validation errors appear/disappear
- Mobile users affected more (90% of reports)

Root Cause Analysis

- **Component:** pages/Checkout.tsx:78-145
- **Issue:** Form re-renders causing uncontrolled input resets
- **Missing:** Proper form state management

Impact

- High checkout abandonment rate
- Mobile conversion significantly impacted
- 25% of users report losing form data

BUG-EC-005: Payment API Call Duplication

Project: E-Commerce Web

Priority:  **HIGH**

Status:  **IN PROGRESS**

Assigned To: Backend + Frontend Team

Created: 2026-04-26

Updated: 2026-05-03

Target Fix Date: 2026-05-07

Description

Payment API endpoint is called multiple times (2-3x) for single payment submission. Results in duplicate charges and duplicate order creation.

Symptoms

- User submits payment once
- Multiple charges appear on credit card
- Multiple orders created in database
- Payment success/error response unclear

Root Cause Analysis

- **Component:** Checkout component + Payment API

- **Issue:** Missing idempotency keys on payment requests
- **Problem Areas:**
 - src/pages/Checkout.tsx - no deduplication
 - backend/src/controllers/OrderController.ts - accepts duplicate requests

Impact

-  **CRITICAL** Financial impact
- Customer trust issue
- Revenue reconciliation issues

Acceptance Criteria

- ☐ Implement idempotency keys in payment requests
- ☐ Backend validates and rejects duplicate requests
- ☐ Payment called exactly once per submission
- ☐ Duplicate protection verified with tests

BUG-EC-006: Product Image Lazy Loading Broken

Project: E-Commerce Web

Priority:  **MEDIUM**

Status:  **UNSTARTED**

Assigned To: Frontend Team

Created: 2026-05-01

Updated: 2026-05-03

Target Fix Date: 2026-05-15

Description

Lazy-loaded product images cause layout shifts and don't load properly on intersection.

Symptoms

- Product list jumps around while loading
- Images take 3+ seconds to appear
- Some images don't load at all

- Network tab shows failed image requests

Root Cause Analysis

- Missing intersection observer implementation
- Incorrect image dimensions in CSS
- Placeholder aspect ratio not preserved

BUG-EC-007: Header Navigation Sticky Position Glitch

Project: E-Commerce Web

Priority:  MEDIUM

Status:  IN PROGRESS

Assigned To: Frontend Team

Created: 2026-04-25

Updated: 2026-05-03

Target Fix Date: 2026-05-12

Description

Header becomes sticky but overlaps content causing readability issues. On scroll up, header doesn't smoothly return.

Symptoms

- Header sticks but covers product titles
- Z-index conflicts with dropdowns
- Jittery animation on mobile
- Search bar hidden behind sticky header

BUG-EC-008: Search Filter Reset on Navigation

Project: E-Commerce Web

Priority:  MEDIUM

Status:  IN PROGRESS

Assigned To: Frontend Team

Created: 2026-04-28

Updated: 2026-05-03

Target Fix Date: 2026-05-14

Description

Applied search filters are lost when navigating away and back to product page.

Symptoms

- User filters by "Electronics"
- Navigates to product detail page
- Returns to product list
- All filters reset, showing full catalog

Root Cause Analysis

- Filter state not persisted to URL
- No proper state management between route changes

BUG-EC-009-010-011: Additional Medium/Low Priority Issues

ID	Title	Priority	Status
BUG-EC-009	Login page CSS responsive issues	MEDIUM	UNSTARTED
BUG-EC-010	Theme toggle doesn't persist on refresh	MEDIUM	UNSTARTED
BUG-EC-011	Mobile keyboard covers form fields	MEDIUM	UNSTARTED
BUG-EC-012	Toast notifications stack overflow	LOW	UNSTARTED
BUG-EC-013	Footer overlaps on mobile	LOW	UNSTARTED

MOBILE PROJECT BUGS (Android)

BUG-MOB-001: WebView Content Sync Delay

Project: Mobile (Android)

Priority:  **CRITICAL**

Status:  **UNSTARTED**

Assigned To: Mobile Team

Created: 2026-05-01

Updated: 2026-05-03

Target Fix Date: 2026-05-08

Description

Content loaded in WebView doesn't sync with native bridge properly. Delays of 1-2 seconds between native and web communication.

Symptoms

- User adds item to cart in WebView
- Native counter doesn't update immediately
- API calls from WebView appear to fail silently
- Navigation between native and web screens broken

Root Cause Analysis

- **Component:** MainActivity.kt WebView initialization
- **Issue:** Message queue not properly configured
- **Missing:** Proper lifecycle handling for WebView-Native communication

Impact

-  Core functionality broken
- User unable to complete purchases
- Mobile app unusable

BUG-MOB-002: Fragment Rotation State Loss

Project: Mobile (Android)

Priority:  **HIGH**

Status:  **IN PROGRESS**

Assigned To: Mobile Team

Created: 2026-04-27

Updated: 2026-05-03

Target Fix Date: 2026-05-09

Description

When device rotates, fragment state is lost causing data refresh delays and UI glitches.

Symptoms

- User filling checkout form
- Rotates device
- Form data lost
- List pagination resets
- Scroll position lost

BUG-MOB-003: Memory Leak in Product List

Project: Mobile (Android)

Priority:  **HIGH**

Status:  **UNSTARTED**

Assigned To: Mobile Team

Created: 2026-04-29

Updated: 2026-05-03

Target Fix Date: 2026-05-10

Description

Product list RecyclerView causes memory leak when scrolling through large lists (1000+ items). App crashes after 10-15 minutes.

Symptoms

- App starts fine
- Scroll through products
- Memory usage increases constantly
- After ~15 min, OutOfMemoryError
- App crashes

Root Cause Analysis

- **Component:** ProductListAdapter.kt
- **Issue:** ViewHolder references not cleared
- **Missing:** Image cache cleanup on item recycle

BUG-MOB-004-013: Additional Mobile Issues

ID	Title	Priority	Status
BUG-MOB-004	Navigation drawer animation stutters	HIGH	IN PROGRESS
BUG-MOB-005	Bottom sheet slides under keyboard	MEDIUM	UNSTARTED
BUG-MOB-006	Image loading timeout (> 5s)	MEDIUM	UNSTARTED
BUG-MOB-007	RecyclerView scroll jank on low-end devices	MEDIUM	IN PROGRESS
BUG-MOB-008	Notification badge disappears randomly	MEDIUM	UNSTARTED
BUG-MOB-009-013	[6 more issues]	LOW	UNSTARTED

DESKTOP PROJECT BUGS (Java/Swing)

BUG-DES-001: Background Sync Thread Deadlock

Project: Desktop (Java)

Priority:  **HIGH**

Status:  **IN PROGRESS**

Assigned To: Desktop Team

Created: 2026-04-24

Updated: 2026-05-03

Target Fix Date: 2026-05-09

Description

Background sync thread occasionally deadlocks UI thread causing application to freeze. Requires force restart.

Symptoms

- Application running normally
- UI becomes unresponsive for 30+ seconds
- System log shows deadlock
- Force close necessary

Root Cause Analysis

- **Component:** SyncManager.java:145-200
- **Issue:** Improper thread synchronization with lock acquisition
- **Missing:** Proper timeout handling

BUG-DES-002-009: Additional Desktop Issues

ID	Title	Priority	Status
BUG-DES-002	Table rendering lag with large datasets (10k+ rows)	HIGH	UNSTARTED
BUG-DES-003	Export to Excel hangs application	MEDIUM	UNSTARTED
BUG-DES-004	Tray icon doesn't respond to clicks	MEDIUM	UNSTARTED
BUG-DES-005	Print dialog freezes	MEDIUM	IN PROGRESS
BUG-DES-006	Settings not persisting across sessions	MEDIUM	UNSTARTED
BUG-DES-007-009	[3 more issues]	LOW	UNSTARTED

WEBAPP PROJECT BUGS (PHP)

BUG-WEB-001: Session Timeout Sync Issue

Project: WebApp (PHP)
Priority: HIGH
Status: IN PROGRESS
Assigned To: Backend Team
Created: 2026-04-26
Updated: 2026-05-03
Target Fix Date: 2026-05-08

Description

User session expires but UI doesn't reflect it immediately. Users can interact briefly before redirect.

Symptoms

- User session expires after 30 min inactivity
- User continues clicking
- Actions process with old session
- Redirect to login happens 5-10 seconds later
- Potential data corruption

BUG-WEB-002-006: Additional WebApp Issues

ID	Title	Priority	Status
BUG-WEB-002	Stock inventory sync delay (1-2 min lag)	HIGH	IN PROGRESS
BUG-WEB-003	Database connection pooling exhaustion	MEDIUM	UNSTARTED
BUG-WEB-004	Slow report generation (> 30s)	MEDIUM	IN PROGRESS
BUG-WEB-005	CSV export encoding issues	LOW	UNSTARTED
BUG-WEB-006	Dashboard graph loading flicker	LOW	UNSTARTED

Summary Statistics

By Project

- **E-Commerce:** 11 bugs (25% of portfolio)
- **Mobile:** 13 bugs (33% of portfolio) - Highest problem area
- **Desktop:** 9 bugs (23% of portfolio)
- **WebApp:** 6 bugs (15% of portfolio)

By Severity

- **Critical:** 2 bugs (5%) - Must fix immediately
- **High:** 9 bugs (23%) - Fix this sprint
- **Medium:** 18 bugs (46%) - Backlog

- **Low:** 10 bugs (26%) - Future

By Status

- **Critical Path:** 2 (must close this week)
- **In Progress:** 10 (ETA this sprint)
- **Unstarted:** 27 (backlog)

Next Steps

1. This Week (Priority):

- ☐ Fix BUG-EC-001 (sync latency)
- ☐ Fix BUG-EC-005 (payment duplication)
- ☐ Fix BUG-MOB-001 (WebView sync)

2. This Sprint:

- ☐ Complete all HIGH priority items
- ☐ Reduce latency metrics to < 100ms

3. Performance Goals:

- Reduce average P95 latency from current 300ms to 150ms
- Eliminate UI freezes completely
